

# Intelligent video and AI services for flawless logistics

SiB Solutions is a logistics technology company enabling flawless logistics across the supply chain. Our intelligent video and AI services instantly provide superior visibility, visual evidence and insights to companies transacting valuable goods with demanding service levels. Flawless logistics is smart for your business, operations and reputation.

## Worldwide, the costs due to shrinkage in logistics is massive

In the logistics industry, goods worth ten billion Euros disappear every month. At the same time, the costs associated with fixing these problems are twice as high, often involving multiple parties in an exhausting blame game.

At SiB Solutions our goal is to put an end to shrinkage, and to change the world of logistics through cutting-edge technologies like Artificial Intelligence (AI), Industrial Internet of Things (IIoT) and intelligent video analysis.

## Flawless logistics is profitable logistics

The combination of data, video and AI in critical areas provides logistical superpowers:

- Maintain Service Level Agreements across your supply chain and put an end to exhausting blame games.
- Cut costs, save money and improve margins.
- Stop errors in real time. Use retrospective analysis for fact-based continuous improvements.
- Strengthen your brand and increase customer satisfaction.
- Take one more step towards sustainability.

## Subscribe to services designed to ensure visibility and insights

Inbound logistics, outbound logistics and inventory handling all benefit from intelligent video analysis and AI. Get fast results in critical areas where goods change ownership.

Our intelligent video and AI services fit companies with one warehouse, as well as companies with complex networks of DCs, warehouses and hubs.

It is perfect for warehouse logistics, manufacturing logistics, transport, last mile and store logistics.

We offer our services with a simple, affordable monthly subscription.

# The Concept

1 Video and data are collected throughout the logistics process. Video is close-up video of goods. Data can come from barcode recording systems, warehouse management systems and so much more.

2 The intelligent video service links and correlates video with collected data. The data may be interlinked with data in WMS, TMS, MES or other system. This integration makes it possible to search video material from order-ids, and other events and activities in the supply chain.

3 When a claim or deviation occurs, simply search the order-id or activity to get an instant view of related videos showing goods handled.

4 Add AI to proactively guide your operations away from errors in real time.

## Our Customers

Many reputable companies already subscribe to our intelligent video and AI services. Come and join...

- Scania
- CEVA Logistics
- King Solutions
- Nowaste Logistics
- ...and more

## Providing Value

Intelligent video and AI services provide value for logistics intense companies

- 3PL
- E-commerce
- Food & Beverage
- Manufacturing
- Retail
- Last mile
- Transport
- Spare parts
- Wholesale
- ...and other industries

“Using video analysis in logistics can have unexpected effects– such as reducing transport costs by 15 percent, something PostNord TPL AB has done for Bauhaus e-commerce logistics.”
